

Belite Bio Receives EMA Approval to Initiate Tinalrebant Phase 3 Clinical Trial for GA in France and Czech Republic

February 6, 2024

- Tinalrebant (a/k/a LBS-008) is Belite Bio's **orally administered tablet** intended to slow disease progression in patients affected with Stargardt Disease (STGD1) and Geographic Atrophy (GA) in advanced Dry Age-related Macular Degeneration (Dry AMD)
- A 2-year global Phase 3 trial in adolescent STGD1 (the "DRAGON" study) and a 2-year global Phase 3 trial in GA (the "PHOENIX" study) are ongoing
- In a 2-year Phase 2 STGD1 trial, Tinalrebant was safe and well-tolerated in all subjects, and a comparison of the DDAF lesion growth between Tinalrebant-treated subjects and the natural history ProgStar participants possessing similar baseline characteristics (aged ≤ 18 years) showed a sustained lower DDAF lesion growth in Tinalrebant-treated subjects ($p < 0.001$)

SAN DIEGO, Feb 5, 2024 – [Belite Bio](#), Inc (NASDAQ: BLTE), a clinical stage biopharmaceutical drug development company focused on advancing novel therapeutics targeting retinal degenerative eye diseases which have significant unmet medical needs, today announces EMA approval for the Phase 3 clinical trial of Tinalrebant for Geographic Atrophy, or the PHOENIX study, in France and Czech Republic. The trial will initiate after agency requested protocol amendment specific to EU has been made.

(For more information, visit clinicaltrials.gov at <https://classic.clinicaltrials.gov/ct2/show/NCT05949593?term=Tinalrebant&draw=2&rank=3>)

About PHOENIX Study

The PHOENIX study is a phase 3, multicenter, double-masked, placebo-controlled, randomized, fixed-dose clinical study designed to evaluate the efficacy and safety of tinalrebant in patients with GA associated with Dry AMD. To date, the Company has commenced the PHOENIX study in the U.S., Taiwan, Australia, UK, Switzerland, and China. Approximately 430 subjects are targeted for enrollment in this study with a 2:1 randomization (tinalrebant:placebo).

About Tinalrebant (a/k/a LBS-008)

Tinalrebant is a novel oral therapy that is intended to reduce the accumulation of vitamin A-based toxins (known as bisretinoids) that cause retinal disease in STGD1 and also contribute to disease progression in GA, or advanced Dry AMD. Bisretinoids are by-products of the visual cycle, which is dependent on the supply of vitamin A (retinol) to the eye. Tinalrebant works by reducing and maintaining levels of serum retinol binding protein 4 (RBP4), the sole carrier protein for retinol transport from the liver to the eye. By modulating the amount of retinol entering the eye, Tinalrebant reduces the formation of bisretinoids. Tinalrebant has been granted Fast Track Designation and Rare Pediatric Disease designation in the U.S., and Orphan Drug Designation in the U.S. and Europe for the treatment of STGD1.

Stargardt Disease (STGD1)

STGD1 is the most common inherited retinal dystrophy (causing blurring or loss of central vision) in both adults and children. The disease is caused by mutations in a retina-specific gene (ABCA4), which results in progressive accumulation of bisretinoids leading to retinal cell death and progressive loss of central vision. The fluorescent properties of bisretinoids and the development of retinal imaging systems have helped ophthalmologists identify and monitor disease progression. Currently, there are no FDA approved treatments for STGD1.

Importantly, STGD1 and GA, or advanced Dry AMD, share a similar pathophysiology, which is characterized by the excessive accumulation of bisretinoids, retinal cell death, and progressive loss of vision. Vision loss occurs slowly, despite peripheral expansion of "dead retina," until the disease reaches the center of the eye (the macula). Therefore, Belite Bio intends to evaluate safety and efficacy of Tinalrebant in GA patients in a 2-year Phase 3 study (PHOENIX).

GA in advanced Dry Age-related Macular Degeneration (Dry AMD)

Dry AMD is a leading cause of vision loss in older adults. Geographic Atrophy, or GA, is the advanced stage of AMD. Currently, there are no FDA approved orally administered treatments for GA and no FDA approved therapies for the other stages of Dry AMD other than GA. There are an estimated 20 million AMD patients in the U.S. and over 196 million patients worldwide with an estimated global direct healthcare cost of US\$255 billion.

About Belite Bio

Belite Bio is a clinical-stage biopharmaceutical drug development company focused on advancing novel therapeutics targeting degenerative retinal diseases that have significant unmet medical needs, such as STGD1 and GA in advanced Dry AMD, in addition to specific metabolic diseases. Important Cautions Regarding Forward Looking Statements

This press release contains forward-looking statements, including statements regarding the potential implications of clinical data for patients, and Belite Bio's advancement of, and anticipated preclinical activities, clinical development, regulatory milestones, and commercialization of its product candidates, and any other statements containing the words "expect", "will", "believe" and similar expressions. Actual results may differ materially from those indicated in the forward-looking statements as a result of various important factors, including but not limited to Belite Bio's ability to demonstrate the safety and efficacy of its drug candidates; the clinical results for its drug candidates, which may not support further development or regulatory approval; the content and timing of decisions made by the relevant regulatory authorities regarding regulatory approval of Belite Bio's drug candidates; the potential efficacy of Tinalarebant, as well as those risks more fully discussed in the "Risk Factors" section in Belite Bio's filings with the U.S. Securities and Exchange Commission. All forward-looking statements are based on information currently available to Belite Bio, and Belite Bio undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as may be required by law.
